Spring 2020
After Spring Break Restart

Data Mining

- The grading methods need to change from before the break
- There is still a value to having frequent quizzes, but I don't know how to give them yet
- But I think they will be quizzes that are posted in a document form, and you will open your favorite editor (A text editor or Word) and type the answers and then submit to Canvas (maybe Teams) in a limited (60 to 70 minutes) amount of time

Data Mining

- I have tried giving on-line quizzes in other classes
- Usually in a similar manner
- They were a disaster
- They were chaotic, unstructured, messy, and really horrible
- People turned in the wrong thing (not the test answers!)
- People turned in the quiz late, or forgot to turn in
- Sometimes four hours late!

Data Mining

- So
- Lets try it again

- Maybe with some changes

Data Mining

- The material (subjects) to be covered for the remainder of the class are:

- x

Data Mining

- The "***tentative***" schedule for the remainder of the class is:
- (this is subject to change, first we need to experiment with taking quizzes)
- March 30, quiz 0a, just to try out the new quiz method
- It won't count, it is an experiment
- Then:
- Quiz 1 – April 6,
- Quiz 2 - April 20,
- Quiz 3 - May 4

Data Mining

- Coming up next…
